

UTM
UNIVERSITI TEKNOLOGI MALAYSIA

FACULTY OF COMPUTING
SESSION 2022/2023, SEMESTER 1

LECTURER:
DR. ISMAIL FAUZI BIN ISNIN

TITLE:
Task 6b: MAKING AN INDIVIDUAL REPORT

GROUP:
(GROUP 6)

Name	Matric ID
AIN NURNABILA BINTI MOHD AZHAR	A23CS0207

Group Name: CircuitCrew (CC)

Contribution of me to the group and the project work

I always play a helpful role in our group as we plan and finish the project's tasks because I'm an active member. I always fulfill my responsibilities by finishing the assignments given by the group leader and ensuring that my input is appreciated by all members of the group. By planning the meetings at convenient times and places that wouldn't interfere with communication, I made sure that everyone in the group could attend both the online and in-person sessions. As a member, I took the initiative to arrange the placement of every room and offered original suggestions for the building's architecture. In addition, I conducted research and created inquiries about the network plan in accordance with the specifications. To identify the optimum fit for our networking system, I also conducted extensive and additional research on a variety of network device kinds. In addition, I assisted the team in determining the building's work area and the network distribution schematics for every room. In order to make sure that all of our efforts were structured and recorded, I finally finished the group report.

Contribution of other members to the group and the project work

DAMIYA AINA BINTI BASIR ABD SHAMMAD:

My main duty was to make sure that each group member finished the duties they were given before the deadline. By creating the floor plan and offering suggestions for the building's architecture, I made a substantial contribution to the project. Together with my partners, I also created a list of issues that we investigated and resolved in order to assess the project's viability. To make sure we didn't go over our budget, I also looked into the best deals available on the market for the necessary gear. Another significant work I finished was creating the building's floor plan. Lastly, I was in charge of finishing the group report and assigning IP addresses and subnetting to every room in the building.

NURUL ASYIKIN BINTI KHAIRUL ANUAR:

I made sure that everyone was aware of the project's requirements. I also contributed insightful ideas for the building's architecture, and I even worked with my teammate to create the floor plan. In order to create a network strategy, I assumed responsibility for formulating queries and locating responses. In addition, I conducted extensive research to locate the best rates for the equipment we required to keep within our budget and offered persuasive arguments for the project's viability. I created the building's network distribution design, subnetted every room, and assigned IP addresses to each one to guarantee a smooth network plan implementation.

ANIS SAFIYYA BINTI JANAI:

One of my duties as a group member will be to videotape the meeting so that we may review it later and review the topics we covered earlier. I gave us some ideas for the building we want to design. We shared ideas and opinions about the general layout and characteristics we wanted to see in the structure. In addition, I calculated the building's scale. To determine the right building size, I took into account a number of variables, including the structure's intended use, the number of people, and the available space. In addition, I invested time in formulating queries and locating responses concerning the prerequisites for creating a network strategy.

Explain how I work as a group, what I have learned from working as a group and what I have learned from doing the project

I am usually a supporting member of the group when it comes to providing insightful and helpful answers because I always have to work well in a team. I always speak to my group members in a cool, collected manner. Since I only talk and discuss things directly, I constantly attempt to communicate with the group in an effective manner. I consistently contributed helpful project development suggestions during discussions with my group.

Working in a group has taught me that communication is crucial to success, and that different approaches to communication can have varied outcomes. Therefore, we must communicate well since it will have a big impact on the result. Furthermore, as the group is always given tasks equitably in order to finish them on time, everyone's cooperation is crucial.

Additionally, I discovered that having a few creative ideas might increase effectiveness and save a great deal of time and burden.

I gained a lot of new knowledge while working on the project, including how to locate rooms and the specifics of different kinds of network equipment. I am able to acquire and expand my understanding of IP addressing as I participate in the completion of jobs like this. After going through the process of finishing the network system design assignments, I have gained knowledge about both the process and the challenges involved.

My comments and suggestions on the project

I would like to offer some feedback and recommendations regarding this project. The helpful advice and well-organized submission deadline that my lecturer, Dr. Ismail, gave my group and I were crucial in helping us finish this assignment. In addition, the project is fascinating and hard because it has the potential to teach me a lot. My recommendation would be to allow students to interact with different kinds of network equipment in real life so they can learn more about them.

Link of My Reflection Video

<https://youtu.be/4iPw0Mmgfc0?si=bpjutxgpygnsRLoJ>

REFLECTION ON EVERY TASK

REFLECTION

➤ TASK 4

I understood how physical infrastructure planning impacts network effectiveness.

➤ TASK 5

I realized the importance of strategic IP addressing for current and future needs.

➤ TASK 6

I learned that documentation and reflection are essential for professional growth.
