1.0 Introduction

We are group of undergraduate Data Engineering students of Universiti Teknologi Malaysia (UTM). We need to conduct a project under our course, System Analysis and Design (SAD). Our project is a part of a company named KADA's cooperative. A cooperative is an organization owned and managed by a group of people to carry out economic activities (business etc.), with the benefits and profits shared. KADA's cooperative current system for applying for a loan is by physical, filling in a form. Our project is to develop a new system to replace this current system. It is to improve the system flow and at the same time solve the problems that they might encounter during their business.

2.0 Method Used

Methods used for gathering information

For this project, we chose interviews as an interactive technique of gathering information. Interviewing is a valuable tool for gathering information on both human and system requirements. Our group collaborated with another group conducted interviews to obtain detailed information from Mr. Ahmad Rohailan Bin Hani and Mrs. Nor Zamani Binti Ismail about the current system and their needs for a new system.

In addition, we use the Joint Application Development (JAD) methodology, which involves the stakeholders, KADA employees, and students of UTM, taking System Analysis and Design for this semester. This interactive technique improved communication by offering a platform for real-time involvement, allowing for fast clarification of needs and quick identification of important priorities.

In general, the combination of interviews and the JAD technique created a strong foundation for gathering useful data. We were able to capture a wide range of stakeholder contributions by combining these interactive methodologies, resulting in a better understanding of the new system's requirements. In the end, this cooperative approach helped successfully design and implement the new system by enhancing the information collected.

2.1 Details of the information gathering method

1. How long do members have to make the RM55 monthly payment to become a KADA cooperative member? Is it until they have totally paid their loan, or is there another condition?

2. How long does it normally take to approve a loan application that is handled by hand manually?
3. Aside from the pay slip, what other features need to be included in the new system?

2.2 Summary from the method

From the interviews conducted with Mr. Ahmad Rohailan Bin Hani and Mrs. Nor Zamani Binti Ismail, we gained some important information about KADA's present operating methods. The current procedure requires users to carefully fill out paper forms when registering as a new member of KADA and when requesting loans from KADA. During our discussion, we discovered that this traditional method had several drawbacks that were highlighted.

Firstly, the use of paper forms makes the loan application and registration process very time-consuming. It is because the users must ensure that each field is completed correctly, which can be complicated and takes time. Next, there is a great chance of errors with the existing process. Form-filling errors are frequent and can have severe consequences, such as providing inaccurate or missing information. These mistakes may result in problems with the loan application processing, which might delay the time it takes for approval. Additionally, the applications may be rejected because of this inaccurate information.

2.3 Document Analysis: collect the exiting documents related to the current system

Mesyuarat Lembaga bil 3/2023 7 Mei 2023

Figure 1, Loan repayment schedule

Figure 1 represents the loan repayment schedule in KADA, created to provide a clear and thorough overview of the payback process throughout the loan period. The schedule shows the principal amount, interest rate, total financing, and monthly installment. The profit rate for this loan repayment may change each year, affecting the overall repayment amount. The total financing amount represents the principal amount borrowed. Each month, a specific installment is paid based on the formula: $(\text{Total Financing Amount} \times \text{Annual Interest Rate (Annual)}) / 12$.

Figure 2, Cooperative member registration form

In order to become a member of Koperasi Kakitangan KADA Berhad, people usually must fill out a membership application. This form typically requests personal information such as name, identity number, contact number, address, and the applicant's ethnic background. Additionally, it also requests family information and employment details within KADA. The application form concludes with a "Yuran dan Sumbangan" section in which applicants commit to pay different fees and contributions upon approval as a member. These include an admission fee, an RM300 minimum share capital, membership fees, member deposits, and other expenses.

maka pengesahan penyata ini dianggap betul dan tuan/puan bersetuju.

Figure 3, Financial statements for KADA staff cooperative members

The financial statement for KADA staff cooperative members gives a thorough summary of their financial activities within the cooperative organization. It contains information about member shares, including contributions like share capital and membership fees. The statement also includes information about member loans within various types of financing offered. To validate the accuracy of these financial records, members must examine and sign the statement, their name, membership number, signature, and the date of confirmation. Furthermore, members indicate whether they agree or disagree with the financial status provided of the KADA staff cooperative, ensuring transparency in the cooperative's activities.

Figure 5, Page 2 Member loan application form

Figure 4 and 5 shows the loan application form that needs to be filled in by members. The loan application form collects the necessary information to process a loan request. It provides Financing Details, which include the loan type, amount, and duration of the loan. The Personal Details section collects the applicant's name, identification number, address, membership number, job title, and bank information. The Applicant's Declaration certifies the accuracy of the information provided. Additionally, to verify employment status, the form needs the employer's verification and the guarantor's details. Finally, a For Office Use section stores internal processing information such as the reception date, reference number, and approval status, ensuring a full review of the loan application.

2.4 Requirement analysis based on interview conducted

Based on the interview conducted, there are some requirements identified for the new system. The new system should have an online registration process that allows users to register quickly and easily. This user-friendly registration process is intended to be simple and convenient for users, allowing them to complete their registration regardless of where they are if they have access to the internet.

Furthermore, the system should be provided with digital forms that include comprehensive validation checks to ensure that all required fields are completed correctly and in line with specified standards. These forms can also be customized with auto-fill methods, allowing for the effective reuse of relevant existing data which will reduce the potential for errors and simplify the data-entering process.

Additionally, the online application system must be easy to navigate, providing users with clear instruction and the ability to track their application status in real-time. The method allows applicants to stay informed and engaged by tracking the status of their applications, reducing concerns, and increasing overall satisfaction. Users are satisfied when they have this level of visibility and control over their applications, which builds trust and confidence in the system's reliability.

3.0 Background Study

Lembaga Kemajuan Pertanian Kemubu (KADA) is an agency under the Ministry of Agriculture and Food Security that is responsible for promoting and promoting the economic and social development of farmers in the Kemubu area at Kelantan. In KADA, there are cooperative. The cooperative allows their members to apply for a loan. KADA employees that are not cooperative members cannot apply for loan. So, to apply for the cooperative, employees need to fill in a form. Then after being a member of the cooperative, they can apply for a loan with the same method, fill in a form.

Generally, KADA's cooperative uses the old method by filling in the form physically which comes with several issues. In this proposal, we will provide our plans for the development of the current system. Not to mention, there are already a lot of online forms to apply for something such as a job, loan etc. Our plans are about building a website that can help KADA and cooperative ease the burden. The website can be accessed by KADA's employees, clerk and board of director. It can help the employee to apply for loan online, clerk to gather and send the data to board of directors faster, and board of directors to approve the loan application easier.

4.0 Problem Statement

1. Error accounting

Usually, fill in the form by hand taking time because it needs to be written carefully so that there are no mistakes about any information that filled in the form. If they do make mistakes, manual correction is needed by erasing or crossing out and rewriting. But certain mistakes might necessitate starting over with a new form.

2. Long approval time

After the form is handed to the superior person, it will take time for them to check the form. Not to mention, the loan approval time depends on what the situation is for. Employees that applies for the loan which is not urgent need to wait for a longer until they receive the result either they approved or not approved.

3. Data loss

The form must be sort and kept in a safe place. Due to a lot of data or form, there is a chance that data is misplaced. It can lead to data loss because when the clerk wants to access the data, the data is not there instead in other data section.

4. Security and privacy

Data in form might be leaked or exposing sensitive information to unauthorized individuals beside the clerk and board of director. This can lead to scamming or leading to potential breaches of confidential information.

5. Double task

The information on the form needs to be filled in by the computer system. It is as backup data if anything happens to the physical form. So, it is making the job twice for the clerk by filling in the same information in two different dimensions.

5.0 Proposed Solution

Technical feasibility

Implementing a systemized loan application process for Lembaga Kemajuan Pertanian Kemubu (KADA) is technically feasible and imperative to address several key challenges. Transitioning from paper-based forms to a digital platform reduces errors encountered during manual data entry, enhancing data accuracy and integrity. By automating the approval process, the system significantly reduces the time required for loan approvals, improving efficiency and customer satisfaction. Moreover, digital storage minimizes the risk of data loss due to misplaced or damaged paper forms, ensuring data availability and continuity. Implementing strong security measures such as encryption and access controls safeguards sensitive information, mitigating the risk of data breaches and ensuring compliance with privacy regulations. Through these technical advancements, the systemized loan application process can revolutionize operations at KADA, providing a secure, efficient, and user-friendly experience for both applicants and staff.

Operational feasibility

Achieving operational feasibility in implementing a systemized loan application process for Lembaga Kemajuan Pertanian Kemubu (KADA) addresses critical challenges in paper-based systems. By transitioning to a digital platform, error encountering from manual data entry is significantly reduced, enhancing data accuracy and integrity. Automation of the approval process decreases the time required for loan approvals. Furthermore, digital storage enhances the risk of data loss due to misplaced or damaged paper forms, ensuring data availability and continuity. Implementing strong security measures safeguards sensitive information, minimizing the risk of data breaches and maintaining compliance with privacy regulations. Through these measures, the systemized loan application process enhances operational efficiency, data security, and staff productivity at KADA.

Economical feasibility

Ensuring the economical feasibility of implementing a systemized loan application process for Lembaga Kemajuan Pertanian Kemubu (KADA) involves a comprehensive cost-benefit analysis, considering the significant challenges by paper-based systems. Transitioning to a digital platform reduces costs associated with error encountering during manual data entry, leading to improved data accuracy and reduced administrative overhead. Automation of the approval process decreases the time required for loan approvals, enhancing operational efficiency and potentially increasing revenue through quicker spending. Moreover, digital storage eliminates the costs incurred due to data loss from misplaced or damaged paper forms, ensuring data availability and reducing the need for costly recovery efforts. Implementing robust security measures not only mitigates the risk of data breaches and associated financial losses but also enhances trust among stakeholders, potentially attracting more loan applicants. Furthermore, reducing the burden on clerks by automating data entry tasks leads to cost savings in terms of labor and increases staff productivity. Through this cost-benefit analysis, it becomes evident that

investing in a systemized loan application process offers substantial long-term economic benefits for KADA, outweighing the initial implementation costs.

Cost-Benefit Analysis

Assumptions	
Sensitivity factor (cost)	1.1
Sensitivity factor (benefit)	1.3
Annual change in production cost	4%
Annual change in benefit	7%

Estimated cost

Accumulated benefit		27950	57857	89857
Gain or Loss		54000	72063	90612
Profitability Index (PI)	1.45			

Conclusion:

It shows that it is a good investment because its index is more than one.

6.0 Objectives

1. To design a registration and loan application website for KADA
2. To analyze the requirements of the website for KADA's employees
3. To create a detail plan to create the system

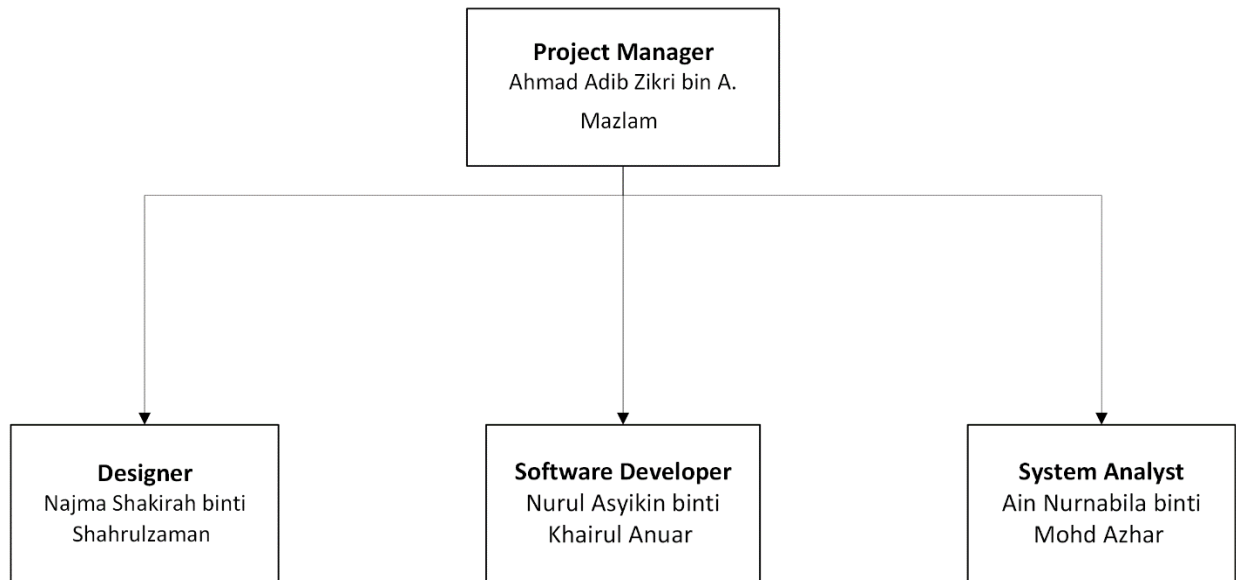

7.0 Scope of the Project

The scope of the project is included:

- All of the applications including cooperative member registration and loan application that are provided by KADA's cooperative will be developed from the existing system.
- Applications for cooperative member registration can be done online anytime by KADA's employees, but application of loan can only be done by KADA's cooperative member. Plus, the approval will be done by the board of directors.
- The developed system can be accessed by employees for both applications, by clerk for data collection and board of directors for approval.

8.0 Project Planning

8.1 Human Resource

Project Manager: Ahmad Adib Zikri bin A. Mazlam

- Plan and coordinate team members.
- Manage and monitor progress of tasks

Designer: Najma Shakirah binti Shahrulzaman

- Design user interfaces, graphics and layouts
- Prepare prototype and wireframe for website

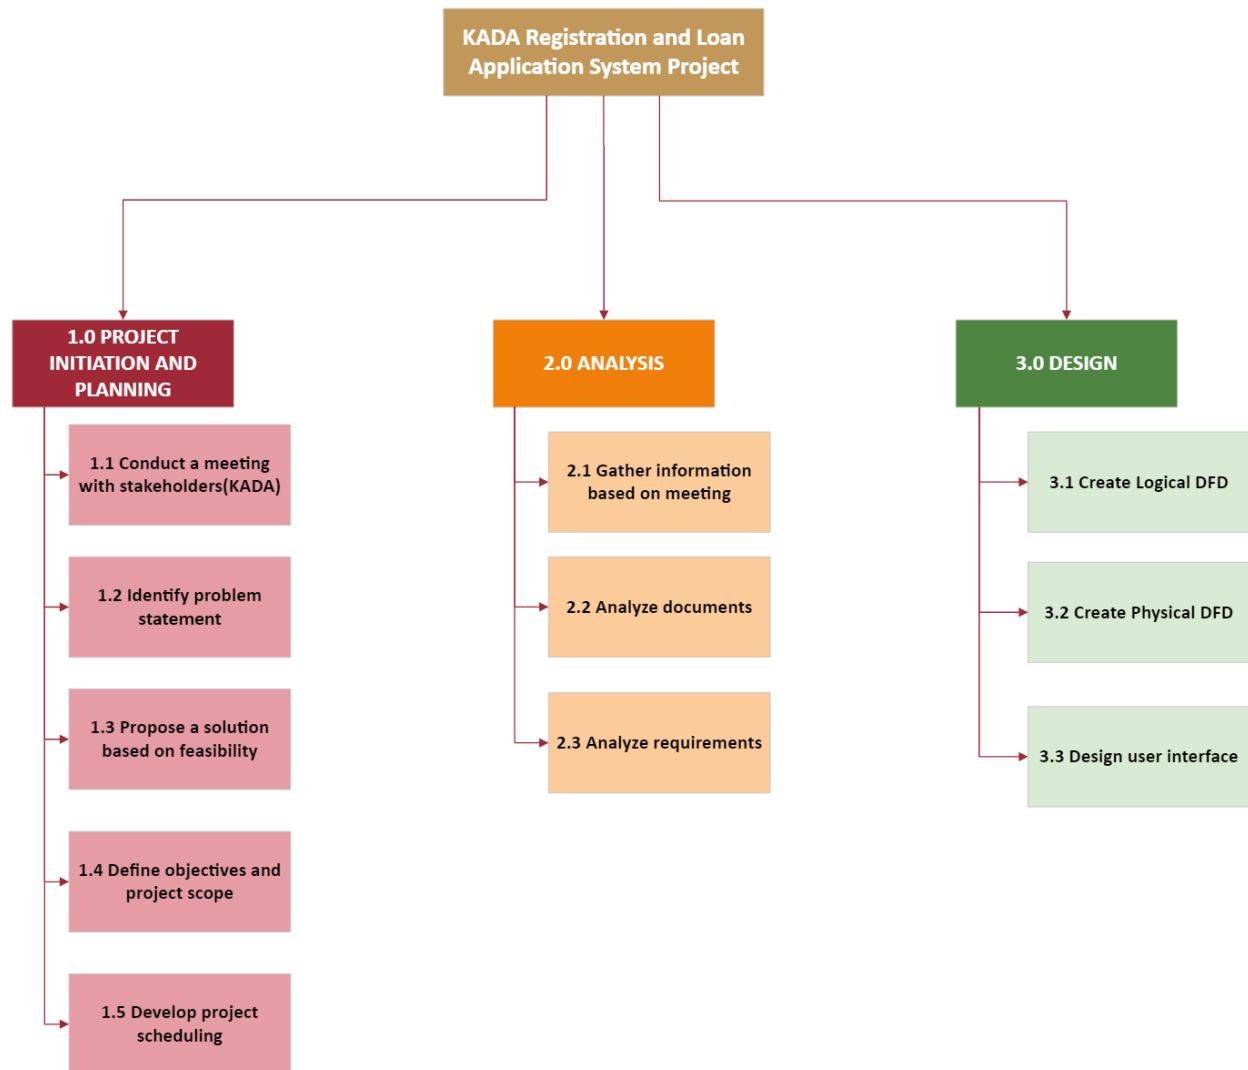

Software Developer: Nurul Asyikin binti Khairul Anuar

- Write, tests and maintain code for website
- Implement features required for website

System Analyst: Ain Nurnabila binti Mohd Azhar

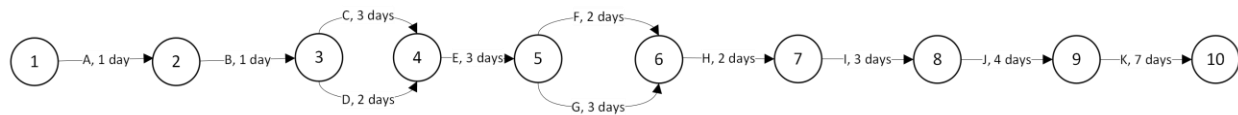

- Analyze business requirements
- Estimate costs and risk management

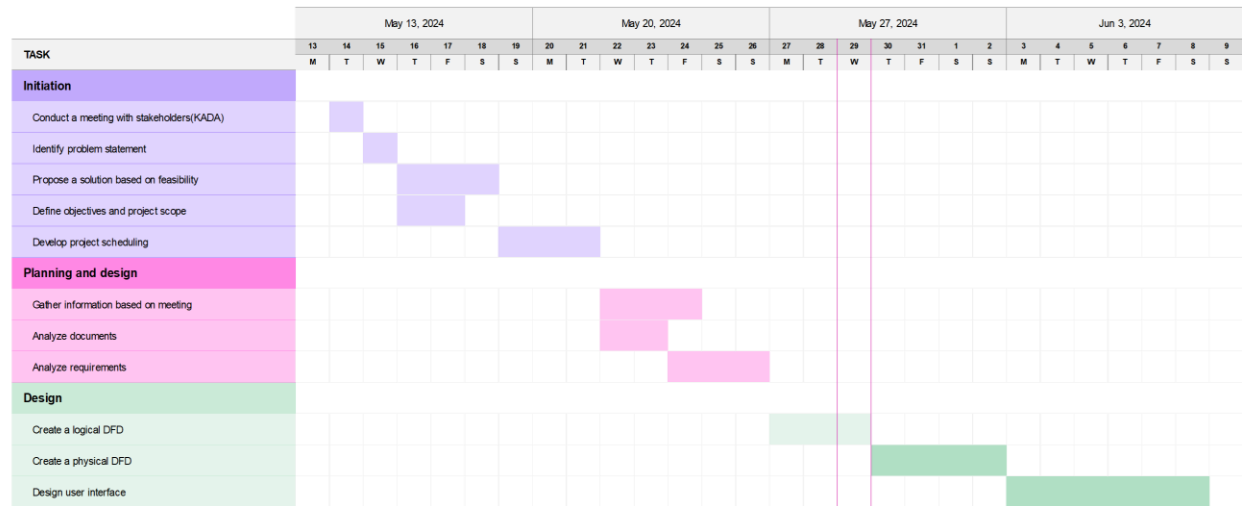

8.2 Work Breakdown Schedule

8.3 Pert Chart

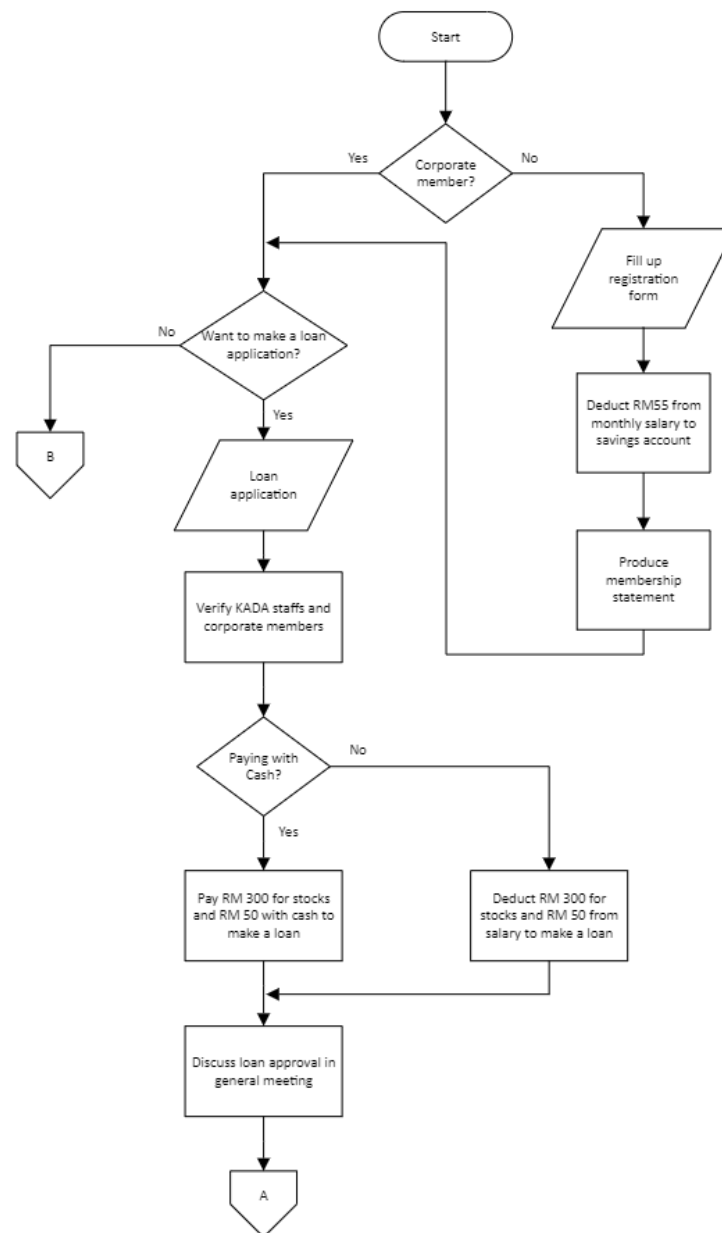

Task	Activity	Predecessor	Duration(days)
A	Conduct a meeting with stakeholders(KADA)	None	1
B	Identify problem statement	A	1
C	Propose a solution based on feasibility	B	3
D	Define objectives and project scope	B	2
E	Develop project scheduling	C,D	3
F	Gather information based on meeting	E	2
G	Analyze documents	E	3
H	Analyze requirements	F,G	2
I	Create a logical DFD	H	3
J	Create a physical DFD	I	4
K	Design user interface	J	7

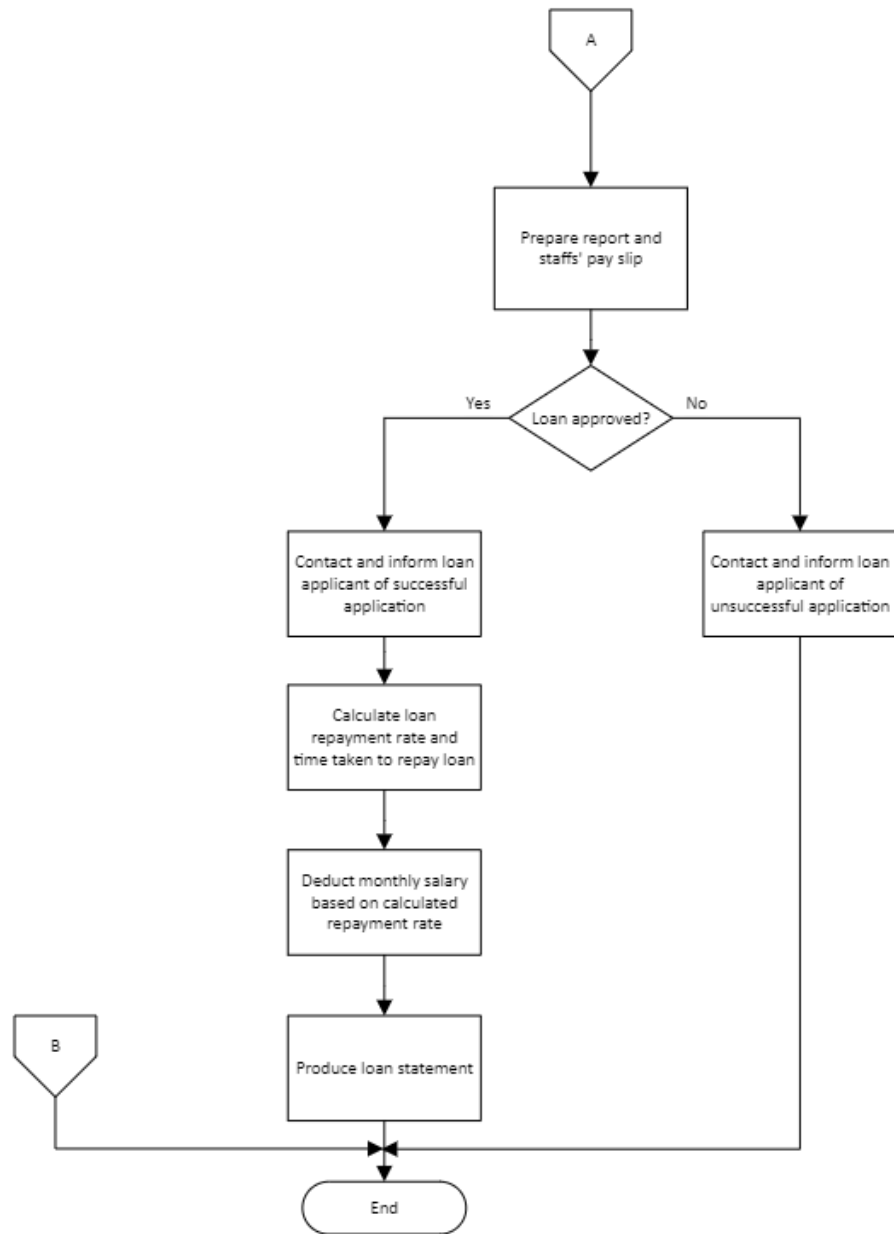

9.0 Requirement Analysis

9.1 Current business process

9.2 Functional Requirement

INPUT, PROCESS, OUTPUT

USERS

INPUT	PROCESS	OUTPUT
User details	Send user details	Member verification
Type of loans	Calculate total loan payment	Total repayment loan

ADMIN

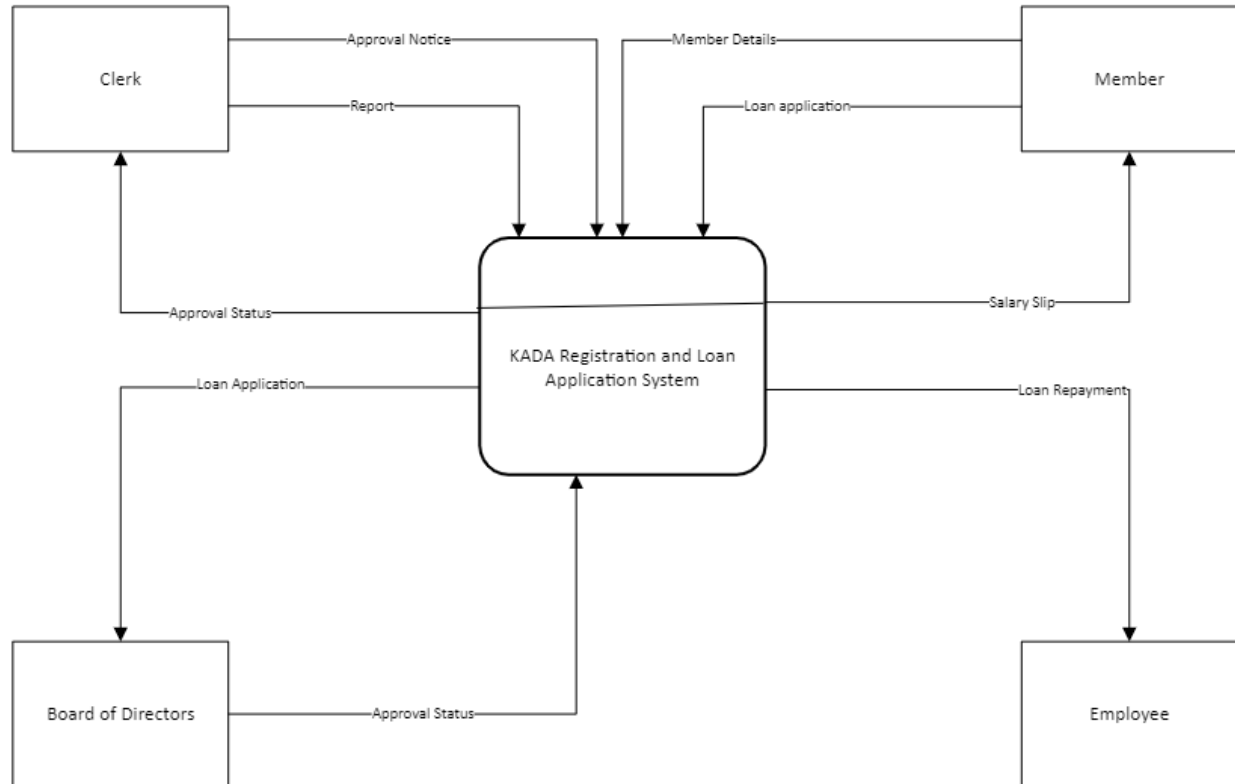

INPUT	PROCESS	OUTPUT
User details	Send user details	Member registration verification
Type of loans	Calculate total loan payment	Total loan payment

9.3 Non-functional Requirement

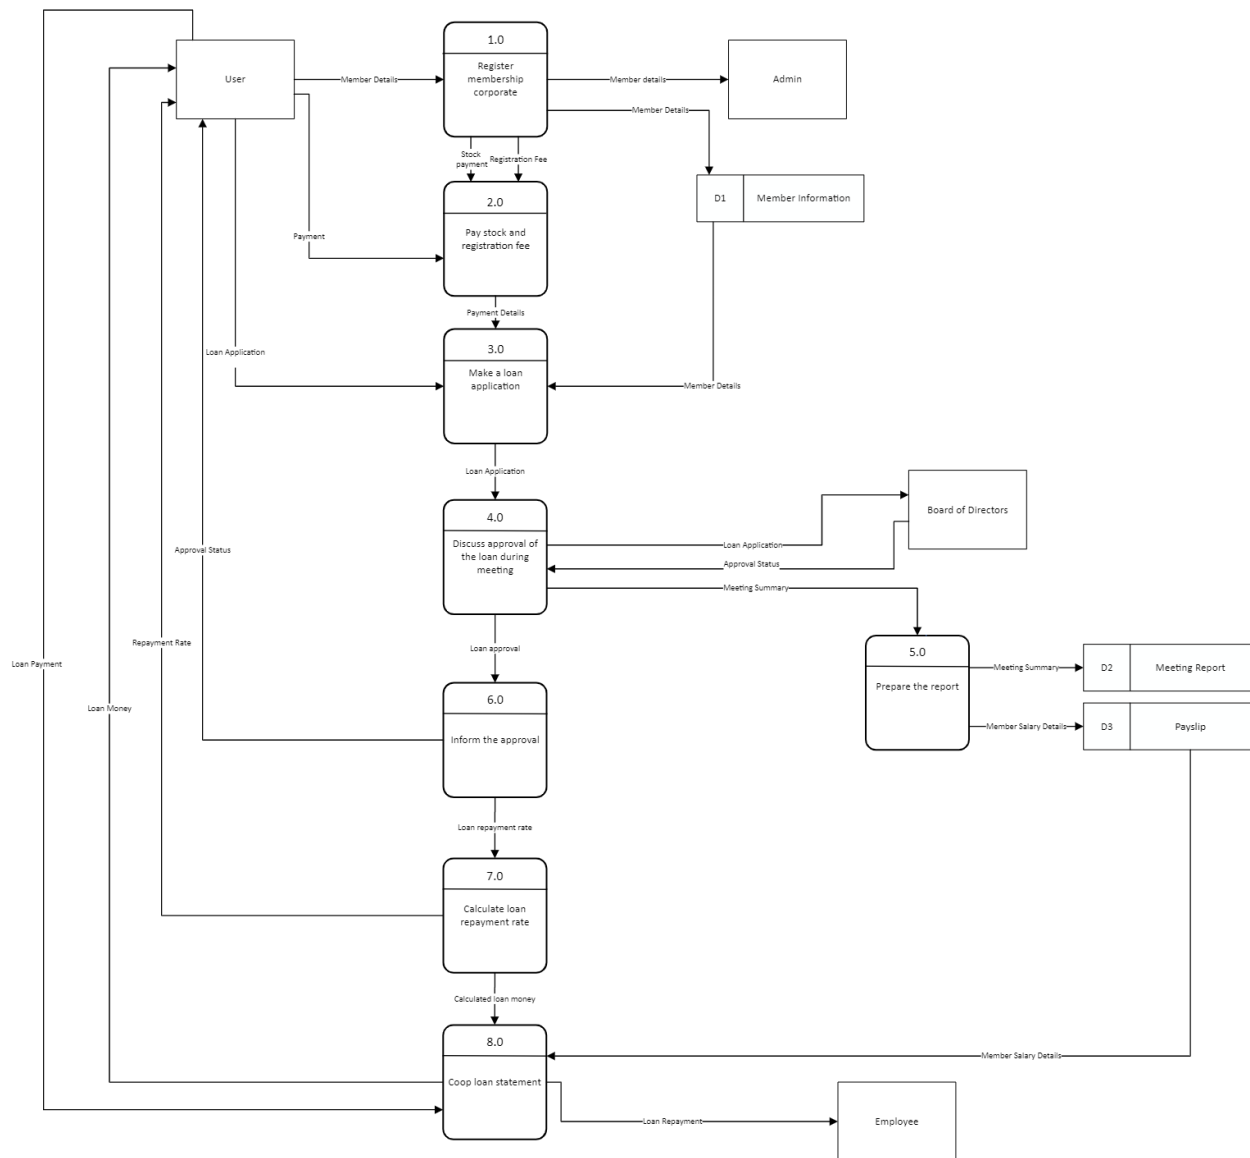

- Application for the loan must be easy to use and understand for the employees, clerk and board of directors.
- Login needed to make sure that user is KADA employees.
- Login using password to secure their account details.
- Login process does not take long time.
- Instructions of website need to be clear so that users are not mistaken between loan application and cooperative member registration.
- Calculation of payment is automatically.
- Payment method can be chosen by users.

9.4 Logical DFD AS-IS system

Context Diagram

Level-0 Diagram

10.0 Benefit and Overall Summary of Proposed System

For Lembaga Kemajuan Pertanian Kemubu (KADA), the implementation of a systemized loan application process brings about a myriad of benefits. Firstly, it streamlines internal operations by digitizing the application process, reducing paperwork, and minimizing errors encountered during manual data entry. This efficiency translates into quicker processing times, enabling KADA to respond promptly to loan requests and disburse funds in a timely manner. By automating approval workflows, the organization can allocate resources more effectively, optimizing staff productivity and reducing administrative overhead.

Furthermore, the digitalization of loan applications enhances data security and privacy, mitigating the risk of data breaches and ensuring compliance with regulatory requirements. With secure digital storage, KADA can safeguard sensitive information and maintain the trust of its stakeholders. Additionally, the system provides valuable insights through data analytics, enabling KADA to make informed decisions regarding loan approvals and risk management.

For users, the systemized loan application process offers convenience, transparency, and accessibility. By providing an online platform for submitting loan applications, KADA simplifies the process for agricultural enterprises, reducing the time and effort required to apply for funding. Real-time status updates allow users to track the progress of their applications, providing peace of mind and improving overall satisfaction with KADA's services.

Moreover, the digital platform facilitates communication between KADA and its users, enabling prompt responses to inquiries and concerns. By offering a user-friendly interface and clear guidance throughout the application process, KADA enhances the experience for its customers, fostering positive relationships and loyalty within the agricultural community. Overall, the systemized loan application process benefits both Lembaga Kemajuan Pertanian Kemubu (KADA) and its users by improving efficiency, security, and user experience in accessing agricultural financing.
